

Four behavioral mechanisms underlying the Sim2Real gain (S1 0-220, S2 0-570 spliced at step 220)

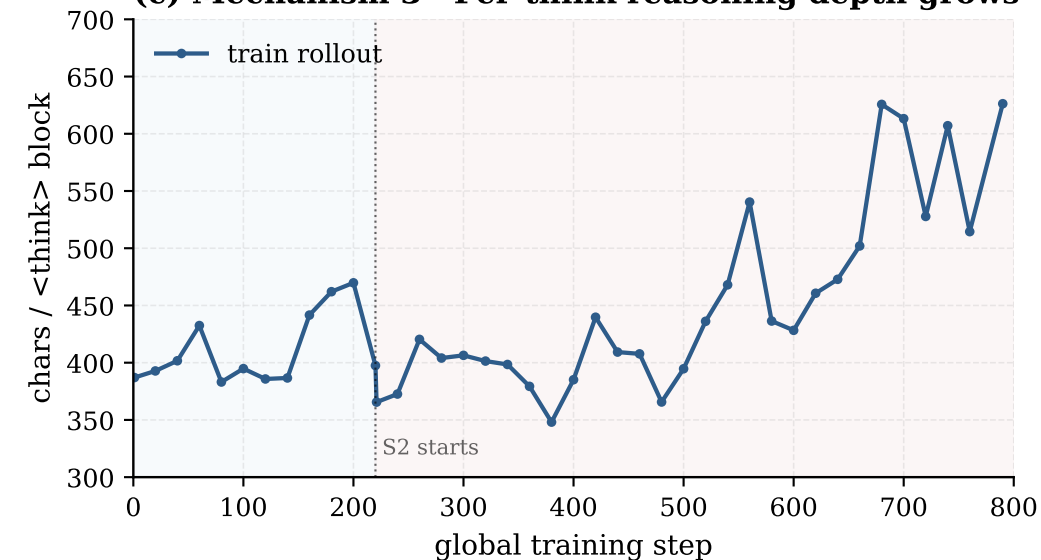

(a) Mechanism 1 · Tool-choice shift: search → browse

(b) Mechanism 2 · Trajectory re-allocation (compress → expand)

(c) Mechanism 3 · Per-think reasoning depth grows

(d) Mechanism 4 · Self-correction volume grows

Blue = train rollout (300 traj/step). Red = GAIA eval (412 tasks). Panel (d) is train-only because GAIA logs strip <think> blocks.
